

PuriPHI

The online data management solution for Summit

A simple solution with clear advantages

Part of Phi's Treasury Capital Markets product portfolio, PuriPhi is the only Finastra endorsed data management tool for Summit. PuriPhi enables efficient online data archiving - driving performance improvement and cost reduction. PuriPhi can be integrated into your existing infrastructure, with no impact on your users.

Realise the benefits of a reducing dataset even as your business continues to grow.

Key benefits for Summit

Improved performance

- Significant performance improvements
- Up to 80% storage cost reduction
- No change in user experience - all data remains accessible through Summit
- Easier Summit upgrades
- Your data managed safely, and according to your bespoke requirements
- A component of best-practice IT governance
- Reduces operational risk
- Compatible with your Big Data goals
- All OS, all Summit versions, all Databases
- Designed for Summit by Summit experts
- Endorsed by Finastra - A Finastra partner product

Reduced data storage costs

No loss of functionality

“ PuriPhi is on the way to take away one third of our current data and reunite ten years of archived database snapshots. It allows us to rethink our view of historical data and it will greatly improve our daily testing environment and regular audit requests. ”

Sylvain Descamps, Summit Product Owner, Natixis

Phi Partners has been a Summit specialist for more than 17 years. PuriPhi was designed specifically for Summit, by Summit experts. It is the only Summit data management tool that is endorsed by Finastra. As a result, you know that you will be using a tool that is trusted, safe and reliable.

Phi is an accredited Finastra partner at level 2: the highest level of any Summit partner.

“ *With our growing business, both capacity and performance are constant concerns for us. We have on-boarded PuriPhi to enable us to address both issues by shrinking our storage footprint across our environments as well as reducing our total trade/static population to gain improvements in both STP and batch performance.* ”

Philip Logan, Summit Product Owner, Lloyds

Receive your free bespoke Summit data analysis report

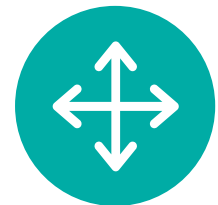

and discover how much you could benefit from a reduced data set in Summit

80%

80% of the data in an average Summit database is not needed in production.
80% savings in storage costs are achievable.

When your Summit system runs faster, your users see results quicker, and downstream deliveries are earlier. With a smaller database, maintenance windows are reduced with quicker housekeeping, backups and restores.

PuriPhi works with any version of Summit, on any OS (Windows, Solaris, Linux) and on any database technology (SQL Server, Oracle, Sybase).

“ *After a recent implementation of Summit, we wanted to ensure that system performance and storage costs never become concerns for us. After very good experience working with Phi Partners on our implementation project, we selected PuriPhi as a robust data management and archiving solution. We consider PuriPhi to be an essential part of best-practice IT governance for Summit.* ”

João Bagão, Head of Summit, Millennium bcp
