

5 Steps Towards Smarter Summit Management with Summit PaaS

Summit PaaS is the new, cloud-enabled, fully managed Summit service from Phi Partners.

Find out how you can implement a smarter approach to your trading technology to save time, stress and money.

Understanding Summit PaaS

Summit PaaS is the new Platform-as-a-Service offering for Summit from Phi Partners. In the same way that Netflix revolutionised TV for viewers, Summit PaaS can transform the way financial institutions approach their trading technology solution.

Our service introduces a consumption-based model, negating the need for large, upfront CapEx investments. Utilising the cloud and automation, Summit PaaS is a cost-effective, flexible, agile and future-facing solution.

Service delivery: How a smarter Summit service works

Summit PaaS is a comprehensive service. This means Phi takes full responsibility for Summit, from app to infra, across support and change. All you need to focus on is the value Summit delivers. Our mutualised teams ensure integration across all system components, and our nearshore model is flexible and cost efficient. With round the clock issue management, guaranteed SLAs and ongoing platform improvements, Summit PaaS is revolutionising Summit service delivery.

Embracing the benefits of the cloud

With Summit PaaS, Phi moves your entire Summit environment to the cloud. We support everything from adoption strategies and business cases, to architecture design and migration. Upon transition, you immediately benefit from elastic pricing and agile, scalable testing environments.

Combining world-class cloud and Summit expertise with a deep understanding of financial institutions and their technology needs, Phi is uniquely placed to help you embrace Summit on the cloud.

Transitioning to Summit PaaS

Making the switch to Summit PaaS is seamless and secure. We move Summit onto a Well Architected cloud infrastructure, utilising automation to ensure efficiency and consistency. Ahead of the move, we conduct a thorough knowledge transfer process which informs service and operational readiness. The end result is a cloud-enabled, ITIL-4 compliant Summit service that completely reflects your business needs and accounts for all your customisations and integrations.

Automation: Unlocking efficiency and platform evergreening

Platform evergreening is one of the standout benefits for Summit PaaS customers. Annual Summit updates and additional on-demand customisations are made possible by automation, with infrastructure as code, containerisation and Kubernetes-enabled process orchestration all serving to bring efficiencies and consistency to change management. In addition, automation enables proactive monitoring and minimises time-intensive manual processes to enhance the Summit user experience and mitigate risk.
